(57) Abstract

**PURPOSE:** To perform video recording even when broadcast time is moved up, down and/or extended, etc., by referring to a program chart inside teletext data when a specific code estimated beforehand for respective broadcast programs is inputted.

**CONSTITUTION:** The reservation setting buttons of VCR/PLUS of a key entry part 11 is operated and the specific code (G code) estimated beforehand is inputted. The inputted G code is decoded to first program reservation data at a VCR/PLUS decoder 12. A timer reservation control part 14 receives decoded program reservation data, controls a teletext control part 6 and retrieves the desired page of the program chart included in the teletext data. Then, second program reservation data corresponding to the retrieved broadcast program are extracted and written in a reservation data memory 20. Then, at the time of executing the reservation, the reservation data written in the reservation data memory 20 are read by the timer reservation control part 14 and the reservation is set.
